

Chemical

Durability

Allen-Bailey Tag & Label uses not only clay coated tag stocks but Tyvek® and Permafibre® to create durable tags that withstand the difficult conditions under which chemical tags must perform. Tags are attached using wire or diamond deadlocks to guarantee a strong hold for an extended period of time. Drum labels have an adhesive to hold them securely to the painted surface of a drum or a simple plastic jug. The labels can even be made with wash-away adhesive for easy removal.

Specifications

Allen-Bailey can apply The Globally Harmonized System of Classification and Labelling of Chemicals (GHS) to its tags and labels to ensure proper identification of hazards and protective measures. Department of Transportation (DOT) chemical tag requirements for specific colors and styles can also be followed. All tags and labels are custom designed to meet your specific needs.

Applications

- Danger & Caution Tags
- DOT Tags
- Drum Chemical Labels
- Pool Chemical Jug Labels
- Tank Wash Tags
- Valve Identification Tags

Styles

- Manifold Tags
- Pressure Sensitive Labels
- Single Tags
